To support them all

EKYCUSH CONTROL

SUPPORT FOR HORSES WITH CUSHING'S SYNDROME

Triple support to provide comfort and bring back vitality to affected horses and ponies.

Can be used in both horses treated or untreated with pergolide.

Can be used as a one-off course or all year round.

EKYCUSH CONTROL

Support for horses with Cushing's syndrome (PPID)

Description

Horses over the age of 15 years are often affected by endocrine disorders, such as Cushing's syndrome (PPID). The associated clinical signs are numerous and vary from one individual to another. In addition to appropriate environmental management and medication, tailored nutritional support can help to provide comfort to horses affected.

Use

EKYCUSH CONTROL is a feed supplement formulated by Laboratoires AUDEVARD. It has been designed to provide nutritional support tailored to horses and ponies with Cushing's syndrome (PPID).

Formula

The complete formula of EKYCUSH CONTROL contains ingredients specifically selected to support affected horses: chasteberry, Mucuna, ginkgo biloba, cinnamon and vitamin A.

The formula contains no ingredients of animal origin and is colourant-free.

Our tip

Whether the horse is already being treated or not, EKYCUSH CONTROL can be used:

- for one-off support during high-risk periods (e.g. change of season etc).
- continuously throughout the year.

Daily intake

1 measured scoop, once daily.

Following veterinary advice, the measure can be adjusted to the needs of each animal. EKYCUSH CONTROL can be given all year round.

1 measured scoop = 30 g.

- Contains Mucuna. Do not use in competing horses.
- Contains chasteberry. Do not use in pregnant or lactating mares.
